Cabrera, A. (1958). *Catalogo de los mamiferos de America del Sur. I. (Metatheria – Unguiculata – Carnivora)*. *Revista del Museo Argentino de Ciencias Naturales “Bernardino Rivadavia”*, Buenos Aires 4(1): iv 307 pp. (Title page dated 1957. This excellent checklist is of interest to students of Australian mammals for two reasons: (i) it is a corrective to those Australians who think that this
country has almost a monopoly of marsupials. For South America, Cabrera recognises 2 superfamilies, 2 families, 15 genera, some subgenera, 70 species and large number of subspecies of marsupials. (ii) Some of the genera of bats proposed by Iredale and Troughton are dealt with in the synonymies. Vespadellus (sic) I. and T. is called a nomen nudum and is placed in synonymy with Eptesicus; Austronomus I. and T. is synonymised with Tadarida (Tadarida); and Micronomus I and T. is synonymised with Tadarida (Mormopterus). Clemens, W.A. (1966). Fossil mammals of the Type Lance Formation Wyoming part II Marsupialia. *University of California Publications, Geological Sciences* **62**: 1–122. 77 text figs. (A monographic study of Late Cretaceous marsupials from a famous fossil locality, the fauna of which contains among other things representatives of ceratopsian dinosaurs, multituberculates, and the earliest marsupials and placentals. Ten species, four genera, and three families of didelphoid marsupials are represented, six species, one genus, and one subfamily being described as new. A revised classification of the Didelphoidea is proposed in which the superfamily is divided into three families, one of which, the Didelphidae, is further divided into four subfamilies. A study of this work is indispensable for Australian workers interested in marsupial classification and phylogeny, especially at the present time when there is such a great upsurge of interest in the subject – J.C). Mitchell, T.L. (1964). *Three expeditions into the interior of Eastern Australia*. (Facsimile reprint published by the Public Library of South Australia, of the 2nd edition, originally published in 1839. New species of recent mammals were collected by Mitchell which are mentioned and figured in the work, and in a letter from Richard Owen published in Vol.2 (pp.365–369) new species of fossil marsupials are described and figured. The descriptions date from the 1st edition of the work (1838)). General; Marsupials;

Mohr, Erna, in collaboration with Th. Haltenorth. *Säugetiere*. This work is a set of 192 coloured plates, each 27 x 19 cm., covering all orders of mammals. The plates were done by Eigener, F. Murr; K. Grossman and H. Vogel. The work is being issued in 6 parts, 2 each in 1958, 1959 and 1960. A list of contents and a portfolio were issued with the first two parts. The publishers are Kronen-Verlag. Erich Cramer 5 of Hamburg.;[The reproduction is by the offset process and is excellent. Australian mammals represented in the collection are 1. *Tachyglossus aculeatus*, 2. *Ornithorhynchus anatinus*, 5. *Sarcophilus harrisi*, 6. *Thylacinus cynocephalus*, 7. *Phascolarctos cinereus*, 8 *Megaleia rufa*. Pictures 1, 5, 7, 8, were issued in 1958, 6 was issued in 1959, and 2 will be issued in 1960. Printed lightly on the reverse of each plate is a brief description of the animal’s habits, behaviour, distribution, etc.; These are very fine pictures. The artists have not only produced good representations of the animals but in most cases have captured the characters of their subjects as well. In fact there is no doubt that the plates of the echidna, devil and red kangaroo (except that its colour is a little too rich) are the best ever published of these species. Monotremes; Marsupials;

Morey, G. (1962). *The Lincoln kangaroos*. Hodder & Stoughton: London 79 pp. (Describes the experiences of an English doctor who kept and bred in captivity a small number of red kangaroos. It is well illustrated with photographs of the author's pets. Some of the photographs in the early part of the book acknowledged from other sources, are of grey kan garoos, which is not stated in the text. The description of certain phases of the birth the author claims to have wit nessed does not tally with critical observations and reads rather like the descriptions in some popular sources. The absurd statement is made (presumably gleaned from Henry Lamond's novel *Big Red*) that 5 to 6 per cent of kangaroos are hermaphrodite.) Marsupials;

Troughton, E. le G. (1965). *Furred animals of Australia*. Angus and Robertson : Sydney 8th edn xxxii 376 pp. 25 pls. (Members will be interested to hear of the recent publication of the 8th (Revised) edition of the standard work on the Australian mammals, Mr E. Le G. Troughton’s "Furred Animals of Australia" (Angus and Robertson Ltd., Sydney). Our veteran member is to be congratulated on the appearance of this new edition and also the fact that his book has been a "best-seller" ever since the first edition appeared in 1941. The book enjoys a wide distribution among Australian country dwellers and there can be no doubt that the author's sympathetic approach has had a profoundly beneficial effect on country people's attitudes to the mammal fauna and its conservation. Ellis Troughton has provided the following note regarding some of the changes in this new edition: "During a recent tour overseas (1964–5), the collections of Australian mammals in the British Museum (Natural History), the Zoological Museum at Oslo, and various famous museums in the United States were studied with the most friendly co-operation of the respective curatorial staffs. The conclusions submitted in the author's recently published review of the pouch-mice of the genus Sminthopsis were confirmed, and the genus is now revised accordingly. The genus of broad-footed pouched-mice (*Antechinus*) and the rodent genus *Notomys* are also considerably revised. At the U. S. National Museum in Washington, the collection of mammals recorded by Curator David H. Johnson in the recently published report on the American-Australian Expedition to Arnhem Land (Vol.4, 1964) were examined and all relevant alterations and additions have been included. Another important addition refers to the discovery in 1960 of the left half of the mandible of a thylacine at about 5,000 ft. in the Central Highlands of New Guinea, involving some profound speculation concerning the origin, radiation, and interchange of the marsupials during prehistoric connections across the Torresian shallows). General; Monotremes; Marsupials; Bats; Land Carnivores; Rodents;

Troughton, E. le G. (1967). Furred animals of Australia. Angus and Robertson : Sydney 9th edn 384 pp. (Differs from previous editions in that it contains information on additions to fauna, occasional minor textual revisions, and a short appendix entitled The furred animals of New Guinea). General; Monotremes; Marsupials; Bats; Rodents; Seals; Dingoes; Land Carnivores;
